DETAILED ACTION

1. Claims 1-46 are pending.

Response to Arguments

2. Applicant's arguments filed 02 June 2005 have been fully considered and they are persuasive.

Allowable Subject Matter

3. **Claims 1-46** are allowed.
4. The following is an examiner's statement of reasons for allowance: The present invention is directed towards a method and apparatus for replicating and analyzing undesirable software entities, such as worm programs, in an emulated data processing and communication environment. Each independent claim identifies the uniquely distinct features **"executing the software program of an isolated network without having a direct connection to another isolated network, monitoring the operation of a software program, and analyzing data within the emulation environment by emulating the behavior of a software program over the network"**.

The closest prior art Schnurer et al. (US Patent No. 5,842,002) discloses a computer virus trapping device that detects and eliminates computer viruses before they can enter a computer system and wreck havoc on its files, peripherals, etc., either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.

The closest prior art Nachenburg (US Patent No. 5,826,013) discloses a polymorphic anti-virus module comprising a CPU emulator for emulating the target program, a virus signature scanning module for scanning decrypted virus code, and an emulation control

module, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.

The closest prior art Chi (US Patent No. 5,978,917) discloses an apparatus and method for detecting the presence of macro viruses within a digital computer, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.

The closest prior art McLain, Jr. (US Patent No. 5,812,826) discloses a method and apparatus for emulating a change-of-state report network fully tests a monitor and/or control system, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.

The closest prior art Chambers (US Patent No. 5,398,196) discloses a behavior analyzing antivirus program detects viral infection of a target program by emulating the execution of the target program and analyzing the emulated execution to detect viral behavior, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.

5. Therefore, **claims 1,27 and 37**, and the respective **dependent claims 2-26, 28-36, and 38-46** are in condition for allowance.

Conclusion

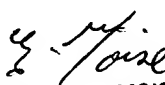

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
